Wolf’s Jewelry Cases

Luster Lock Technology, known as LusterLoc™, is an innovative solution developed by WOLF to combat the common problem of jewelry tarnishing. This patented technology is ingeniously integrated into the fabric lining of WOLF's jewelry cases. The LusterLoc™ lining works by absorbing the gases that cause tarnishing, effectively creating an environment that prevents the chemical reactions responsible for the loss of luster in precious metals. Remarkably, this technology has been tested to keep jewelry looking pristine for up to 35 years, which is a testament to its effectiveness and the meticulous research that went into its

development. Jewelry enthusiasts can appreciate the peace of mind that comes with knowing their cherished pieces are protected against tarnish, often caused by exposure to air and certain materials. WOLF's commitment to quality and innovation is evident in their use of LusterLoc™, ensuring that jewelry stored in their cases remains as radiant as the day it was first worn.
